

Neo Eye PMMA Lens

- Various models to fulfill your surgical needs
- High resolution
- Fine surface
- Smooth Implantation
- Superior lens centration
- Low EO Residual
- Resistance to YAG damage

Neo Eye Foldable Lens

- Material biocompatibility
- Zero haptic angulation
- Easy implantation procedure
- Well centered
- Good haptic memory
- Ideal folding and unfolding behavior
- Fast optical recovery
- YAG laser compatible

One-piece PMMA Posterior Chamber IOL (Intraocular Lens) is available in a range of designs and diopters for both ECCE and Phaco surgical procedures. Equiconvex design yielding lightest IOL even at higher dioptric power combined with step vaulted haptic offering greater stability in place and easier insertion to eyes.

Manufactured by state-of-the-art technology guaranteeing sub-micron precision of unsurpassed accuracy. Guaranteed accuracy and quality of optic and consistency of haptic.

Using clinical quality PMMA with UV blocker. Material master file submitted with US FDA. Guaranteed safety, mechanical strength and highest resolution .

Clean rooms and sterilization process validated in conformance with US FDA standard.

Competitive pricing for quality IOL
